PRODUCT: SBZ Anti-Theft Marker and SBZ Extractant P2 Test Kit
SAMPLE SOURCE: As Supplied
SAMPLE RECEIVED: September 3rd 2009

Certificate of quality

SBZ Corporation has supplied SGS UK Ltd in West Thurrock with a sample of the SBZ Anti-Theft Marker and the SBZ Extractant P2 Testing Kit.

SGS provided a sample of diesel fuel on which to perform the test.

The fuel was split into two batches, one of which was doped with the recommended 50 ppm of SBZ Anti-Theft Marker. The second batch was used as control.

The SBZ Extractant P2 test kit contained several vials, a measuring cup, a dropper, a bottle of a marker developer, and instructions on how to use the kit.

Two samples of untreated diesel fuel were treated following the instructions specified in the kit. After a few seconds a clear layer separated at the bottom. This result was regarded as negative, and the samples used subsequently as control for the fuel batch containing the marker.

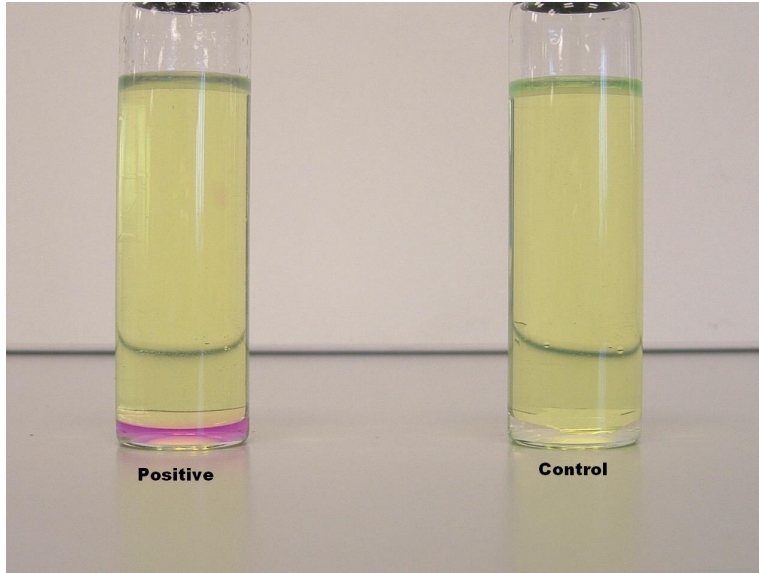

Two samples of diesel containing 50 ppm of the SBZ Anti-Theft Marker were also tested. After a few seconds the layer separated at the bottom developed a distinctive pink colour. This result was regarded as positive.

The difference between the positive and negative results is such that it is not possible to mistake one for another. The reaction with the developing liquid is quick and distinctive, not raising concerns about detecting faux positives.

The picture below illustrates a positive result and a control sample. The difference between results is easily discernible.
